

**Amendments to the Specification**

Please replace the paragraph beginning on page 2, line 28 with the following amended paragraph:

A method for processing a Java Archive (JAR) file to provide an application file adapted for a target environment in accordance with one embodiment of the invention comprises removing from the JAR file at least a portion of information not necessary for running the application; mapping at least one of application defined class, field and method names to shorter names; and mapping at least one of target environment defined class, field and method names to corresponding target device names.
